Sebastian Siewiera

Front-end Developer

I am an experienced warehouse worker who wants to try my hand at the IT industry. The desire to change the industry is caused by a passion for programming. I learn in my free time write programs in different languages, but I feel best in Front-end projects. I improve myself by eliminating errors and problems while writing. I am an ambitious and fast learning person who likes to have a job planned and implement it step by step. As the deputy shift leader, I manage a team of warehouse workers and together with the team we carry out our tasks. The desire to develop and constantly improve my qualifications is what drives me to learn new things and join a company where I will be able to achieve these goals.

Projects
